

**DAY 1 - November 20, 2026**

| Time                                       | Topic                                                                                                                                      | Faculty                        |
|--------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------|
| 8:00 - 9:00 am                             | Oral platform presentations                                                                                                                |                                |
| <b>GENETICS IN NEUROMUSCULAR DISORDERS</b> |                                                                                                                                            |                                |
| 9:00 - 9:25 am                             | Beyond muscle biopsy: How Next-Gen sequencing is rewriting myopathy diagnosis                                                              | <b>Mohd Faruq</b>              |
| 9:25 - 9:50 am                             | Rewriting the Genetic Code: The Dawn of Antisense Oligonucleotides in Neuromuscular Disease                                                | <b>Renu Suthar</b>             |
| 9:50 - 10:15 am                            | Muscles, Genes, and Hope: The Story of Duchenne Muscular Dystrophy                                                                         | <b>Ann Agnes Mathew</b>        |
| 10:15 - 10:40 am                           | Sparing the Motor Neuron: Novel Neuroprotective Strategies in Spinal Muscular Atrophy                                                      | <b>Sheffali Gulati</b>         |
| 10:40 - 11:00 am                           | <b>TEA BREAK</b>                                                                                                                           |                                |
| 11:00 - 11:45 pm                           | PRESIDENTIAL ORATION<br>My Patients my teachers- four decades in myology                                                                   | <b>Satish Khadilkar</b>        |
| 11:45 - 1.00 pm                            | <b>Workshop USG in nerve disorders</b>                                                                                                     |                                |
| 11:45 - 12:10 pm                           | Integration of electrophysiology and ultrasonography in neuromuscular disorders                                                            | <b>Nens van Alfen</b>          |
| 12:10 - 12:25 pm                           | Basic machine settings and understanding knobology                                                                                         | <b>Ujjawal Roy</b>             |
| 12:25 - 12:40 pm                           | Muscles and nerves of upper limb                                                                                                           | <b>Y Muralidhar Reddy</b>      |
| 12:40 - 1:10 pm                            | <b>Hands on session:</b><br>Station 1 - Basic machine settings and understanding knobology<br>Station 2 - Muscles and nerves of upper limb |                                |
| 1.10 - 2.00 pm                             | <b>LUNCH</b>                                                                                                                               |                                |
| 2:00 - 4:30 pm                             | Electrophysiology workshop (EMG) * 2 stn                                                                                                   |                                |
| 2:00 - 2:45 pm                             | Spontaneous muscular activity, and interference patterns                                                                                   | <b>Khushnuma A. Mansukhani</b> |
| 2:45 - 3:30 pm                             | Neuromuscular Junction                                                                                                                     | <b>Ashish Duggal</b>           |
| 3:30 - 4:15 pm                             | Motor unit potential, normal and abnormal, it's recruitment                                                                                | <b>Swati Shah</b>              |
| 4:30 - 5.00 pm                             | <b>TEA</b>                                                                                                                                 |                                |

| Time                                          | Topic                                                                  | Faculty          |
|-----------------------------------------------|------------------------------------------------------------------------|------------------|
| <b>IMMUNE MEDIATED NERVE-MUSCLE DISORDERS</b> |                                                                        |                  |
| 5:00 - 5:30 pm                                | Clinical pearls in Neuropathies                                        | Vaibhav Wadwekar |
| 5:30 - 6:00 pm                                | Nodes of Ranvier under attack: The growing spectrum of paranodopathies | Veena Vedartham  |
| 6:00 - 6:30 pm                                | Autoimmune autonomic neuropathies                                      | Sarath Menon     |
| 6:30 - 7:00 pm                                | Current role of thymectomy in myasthenia gravis                        | Sumit Singh      |
| 7:00 pm onwards                               | <b>INAUGURATION AND DINNER</b>                                         |                  |

## DAY 2 - November 21, 2026

| Time             | Topic                                                                                                               | Faculty                                            |
|------------------|---------------------------------------------------------------------------------------------------------------------|----------------------------------------------------|
| 8:00 - 9:00 am   | Oral Presentation                                                                                                   |                                                    |
|                  | <b>MIXED BAG</b>                                                                                                    |                                                    |
| 9:00 - 9:20 am   | Current role of muscle biopsy in Myopathies                                                                         | M C Sharma                                         |
| 9:20 - 9:40 am   | Decoding Muscle Channelopathies: Harmonizing Genomic Architecture, Clinical Phenotypes, and Novel Treatments        | Abeer Goel                                         |
| 9:40 - 10:00 am  | The Diabetic Nerve: Beyond Glucose Control to Neural Regeneration                                                   | Abhishesk Pathak                                   |
| 10:00 - 10:20 am | Repeat Expansion/Contraction disorders in NMDs                                                                      | Vishnu VY                                          |
| 10:20 - 11:00 am | Precision Diagnostics: Towards Personalised Medicine in Primary Mitochondrial Diseases                              | Robert Pitceathly                                  |
| 11:00 - 11:15 am | <b>TEA BREAK</b>                                                                                                    |                                                    |
| 11:15 - 1:30 pm  | Workshop of USG in nerve disorders * 2 stns<br>- Entrapment neuropathies<br>- Inflammatory neuropathies esp Leprosy | Ujjawal Roy<br>Nens van Alfen<br>Y Murlidhar Reddy |
| 1:30 - 2:00 pm   | <b>LUNCH</b>                                                                                                        |                                                    |
| 2:00 - 2:15 pm   | Cardiac involvement in neuromuscular diseases                                                                       | Deepti Siddharthan                                 |
| 2:15 - 2:30 pm   | Tropical Myositis                                                                                                   | Jayantee Kalita                                    |
| 2:30 - 2:45 pm   | How do I treat ALS                                                                                                  | Vineeth Jaison                                     |
| 2:45 - 3:00 pm   | What's new in GBS/ CIDP?                                                                                            | Saman Fatima                                       |
| 3:00 - 3:15 pm   | What's new in LGMD?                                                                                                 | Jharna Mahajan<br>Bhanushali                       |

**DAY 2 - November 21, 2026**

| Time           | Topic                                                             | Faculty                                       |
|----------------|-------------------------------------------------------------------|-----------------------------------------------|
| 3:15 - 3:30 pm | What's new in Myotonic dystrophy?                                 | Swati Shah                                    |
| 3:30 - 3:45 pm | What's new in Myasthenia Gravis?                                  | Sunil Gajre                                   |
| 3:45 - 4:00 pm | What's new in Myositis?                                           | Ayush Agarwal                                 |
| 4:00 - 4:15 pm | Eye: A Window to Nerve and Muscle Disorders                       | Arun Koul                                     |
| 4:15 - 4:30 pm | Machine learning application in neuromuscular disorders           | SP Gorthi                                     |
| 4:30 - 5:30 pm | CPC - Hyperactive Muscles, Hidden Disease: A Diagnostic Challenge | Vimal Paliwal<br>Sanjeev K. Bhoi<br>MC Sharma |
| 5:30 - 5:50 pm | Legal Issues in Medical practice: Current Perspective             | Girish Tyagi                                  |
